Equipment for quality and safety

TERMOREGOLATORI

MULTI THERMO

Termoregolatore unico in grado di gestire da 2 a 4 zone di riscaldamento indipendenti per un risparmio nella gestione del sistema. La differenziazione delle temperature all'interno di un unico stampo è fondamentale in una buona gestione degli impianti, al fine del raggiungimento di prestazioni ottimali

- Unica interfaccia per massimo 4 zone
- Unica pompa per massimo 4 zone
- Control alarms

CENTRALINE CAMERE CALDE

Thermal controller

Centraline modulari per la gestione dei canali caldi degli stampi costruite con logica controllata da PLC e attuazione delle resistenze tramite relè statici

- Riduzione dei costi di manutenzione
- Stabilizzazione delle temperature controllate

TUBI INDUSTRIALI ROSSI E BLU

RED AND BLUE INDUSTRIAL PIPES

Multiuso e flessibile, composto da copertura in PVC colorata rossa o blu e sottostato PVC nitrile nero, rinforzato con fibra di poliestere ad alta resistenza, impiegato per differenziare i circuiti di mandata e ritorno in modo da semplificare la connessione e la verifica dell'impianto di raffreddamento.

- PVC ad ingredienti approvati FDA o BGA per applicazioni alimentari
- Trasporto di molti liquidi e gas sotto pressione

MANIFOLDS

MANIFOLDS

Single thermoregulator able to manage from 2 to 4 independent heating zones so as to save in the system management. The temperature differentiation within a single mould is essential to a good plant management to achieve optimal performance.

- Single interface for maximum 4 zones
- Single pump for maximum 4 zones
- Control alarms

CENTRALINE CAMERE CALDE

Thermal controller

The thermal controllers are used for the management of the hot runners of the molds and built with a logic controlled by PLC and an implementation of the resistances by static relays

- Reduction of the costs of maintenance
- Stabilization of the controlled temperatures

TUBI INDUSTRIALI ROSSI E BLU

RED AND BLUE INDUSTRIAL PIPES

Multi-purpose and flexible, composed by a red or blue colored PVC cover and a black nitrile PVC substrate, reinforced with high-strength polyester fiber used to differentiate the flow and return circuits in order to simplify the connection and the check of the cooling system.

- PVC with FDA or BGA approved ingredients for food applications
- Transport of many liquids and gases under pressure

MANIFOLDS

MANIFOLDS IN ALLUMINIO

Collettori modulari da montare sulla presa o direttamente sullo stampo per regolare il passaggio dell'acqua nei circuiti di raffreddamento. Realizzati in poliarilammide rinforzato con fibra di vetro sono inattaccabili da sedimenti calcarei e agenti corrosivi.

- Single interface for maximum 4 zones
- Single pump for maximum 4 zones
- Control alarms

CENTRALINE CAMERE CALDE

Thermal controller

The modular manifolds are for being mounted on the press or directly on the mould to regulate the water flow in the cooling circuits. They are resistant to calcareous sediments and corrosive agents, for their realization in polyarilammide reinforced with fiberglass.

- Single interface for maximum 4 zones
- Single pump for maximum 4 zones
- Control alarms

MANIFOLDS

MANIFOLDS IN ALLUMINIO

Modular manifolds designed to regulate the water flow in the cooling circuits with a remote viewing of the output temperatures of each individual circuit which is also able to highlight any malfunctions of the systems.

- Flow regulation in relation to the detected temperature
- Verifiability of the channel status
- Application on the press plane or on the mould

MANIFOLDS

MANIFOLDS IN ALLUMINIO

Modular manifolds designed to regulate the water flow in the cooling circuits with a remote viewing of the output temperatures of each individual circuit which is also able to highlight any malfunctions of the systems.

- Flow regulation in relation to the detected temperature
- Verifiability of the channel status
- Application on the press plane or on the mould
